

['tag;1', 'Events;1', 'LuminosityBlocks;1', 'Runs;1', 'MetaData;1', 'ParameterSets;1']

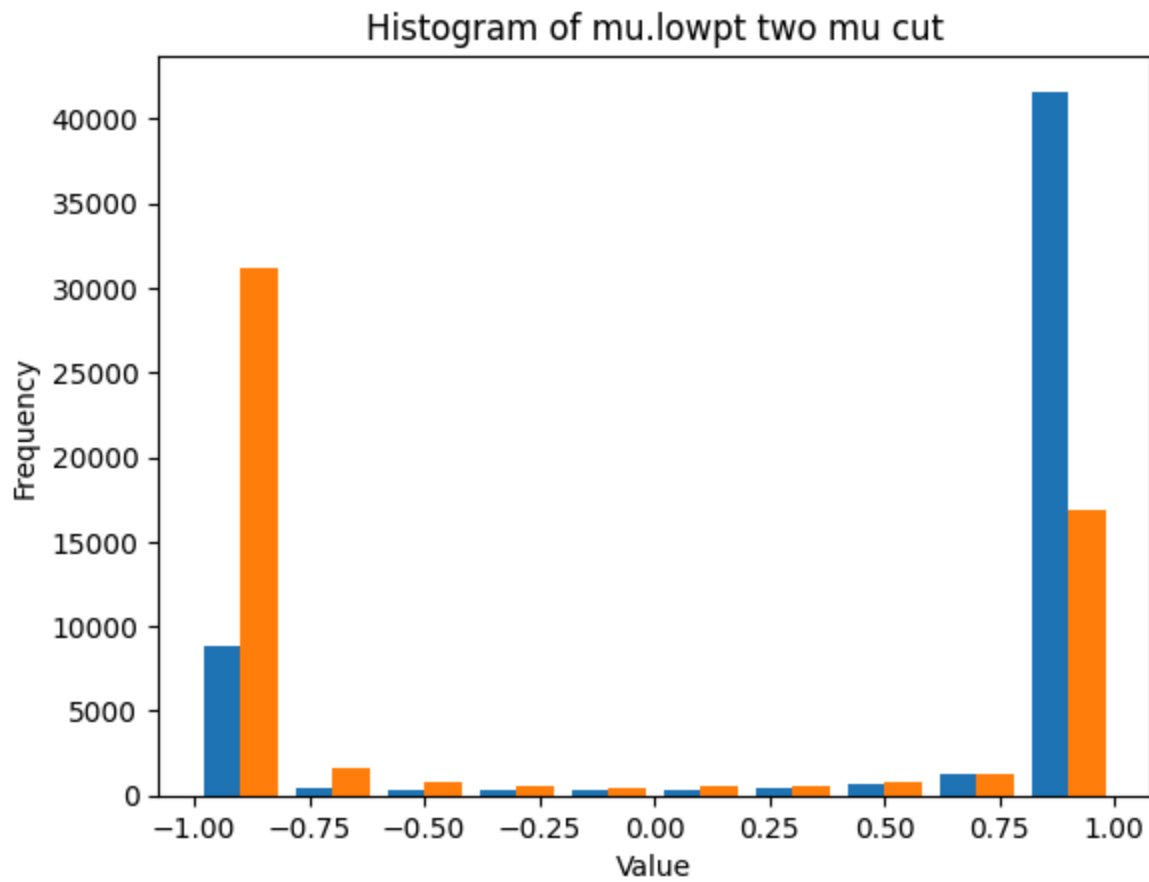

number of all events 262125

efficiency of trigger is therefore 60.526 %

efficiency of trigger for events with one muon 29.044 %

efficiency of trigger for events with two muons 20.825 %

I doubt I have done this right, but the cutoff for these histograms are -1,1 , so I would say this is when the trigger turns on
